Swaziland HIV Prevention eToolkit
A collection of publications on different themes relating to HIV prevention

What's new
- News: International Condom Day 13 February 2019
- News: SODV Act not deterring partners from assaulting their lovers
- Resource: A national study on the drivers of violence against children in Swaziland

Speaking Books
A notable proportion of HIV/AIDS primary care in the United States is provided by advanced practice nurses and physician assistants. As a result, front line primary care providers may be less familiar with management of HIV/AIDS disease, as outlined in U.S. Department of Health and Human Services treatment guidelines (available at aidsinfo.nih.gov) and clinical practices presented in this Guide. In: A Guide to Primary Care of People with HIV/AIDS, 2004 Edition. Bartlett JG, Cheever LW, Johnson MP, et al., eds. Rockville, MD: U.S. Department of Health and Human Services; 2004:5-11. People with HIV/AIDS can live longer, healthier lives because of advances in treatment of HIV infection. However, longer lives are associated with increased prevalence of 1) adverse effects of HIV infection, 2) adverse effects of the drugs used to treat HIV, and 3) concurrent medical conditions that would occur in the absence of HIV. Effective management of chronic diseases in the primary care setting requires the coordination of interventions that occur at the level of the clinical services, the community supports for those clinical services, and the individual patient. While clinical services begin in the primary care clinic, community supports are needed, and the patient must be engaged to enhance self-management. The guide refers to the nutritional care and support needs of individuals infected with HIV; that is, they have the virus with or without signs of AIDS. The guide is also designed for individuals, families and communities affected by HIV; that is, they may or may not be HIV-infected but are experiencing the social, economic and often health consequences of the virus. HIV is transmitted through three primary routes: 1) Having unprotected sex with a person already carrying the HIV virus. HIV/AIDS and Nutrition: A Review of the Literature and Recommendations for Nutritional Care and Support in Africa. Washington, DC: Academy for Educational Development. Wences, Msuya, Mustafa Kudrati, Rakesh Rajani, and Heiner Grosskurth.
