ISO 45001 allows for occupational health and safety to be easily integrated with other management systems throughout the organization, eventually becoming part of the company's identity. Prevention is emphasized rather than reaction. Prevention must become a fundamental requirement of the OH&S management system. When incidents do occur, compliant organizations should determine why the incident occurred and act to assure it does not re-occur. The management system should drive and encourage a continual improvement cycle and culture within the organization. The new ISO 45001 Occupational Hea... The importance of managing occupational health and safety in an organization on a sound footing is recognized by all interested parties such as employers, employees, customers, suppliers, insurers, shareholders, contractors, regulatory agencies and the wider community. There is a necessity for an organization to control and improve its occupational health and safety (OH&S) performance. Every organization needs to have sound health and safety policies and show a strong commitment for the health and safety of its employees. This can be achieved by establishing and implementing an occupationa...
